**EXPERIMENT - 10**

**Aim**

To create data visualizations such as pie charts and bar graphs for an inventory management system using JavaScript.

**Introduction**

Data visualization is used to represent data in graphical form, making it easier to understand and analyze. Charts like pie charts and bar graphs help in comparing values and identifying patterns.

In this experiment, pie charts and bar graphs are created to display inventory data using JavaScript and Chart.js.

**Procedure :**

**Step 1: Create HTML File**

index.html > ...

```html
<!DOCTYPE html>
<html>
<head>
    <title>Inventory Visualization</title>

    <style>
        body {
            font-family: Arial;
            text-align: center;
        }

        .chart-container {
            width: 400px;
            height: 400px;
            margin: 20px auto;
        }
    </style>
</head>
<body>
<h2>Inventory Management System</h2>
<div class="chart-container">
    <canvas id="pieChart"></canvas>
</div>
<div class="chart-container">
    <canvas id="barChart"></canvas>
</div>
<script src="https://cdn.jsdelivr.net/npm/chart.js"></script>
<script src="script.js"></script>

</body>
</html>
```

- Created an HTML file with title and headings
- Added two canvas elements for charts
- Linked Chart.js library

**Step 2: Define Data in JavaScript**

```js
const data = {
  labels: ['Electronics', 'Clothing', 'Books', 'Toys', 'Home Appliances', 'Cosmetics'],
  datasets: [{
    label: 'Items in Stock',
    data: [200, 150, 80, 50, 30, 230],
    backgroundColor: [
      'red', 'blue', 'green', 'orange', 'purple', 'cyan'
    ]
  }]
};
new Chart(document.getElementById('pieChart'), {
  type: 'pie',
  data: data,
  options: {
    responsive: true,
    maintainAspectRatio: false
  }
});
new Chart(document.getElementById('barChart'), {
  type: 'bar',
  data: data,
  options: {
    responsive: true,
    maintainAspectRatio: false,
    scales: {
      y: {
        beginAtZero: true
      }
    }
  }
});
```

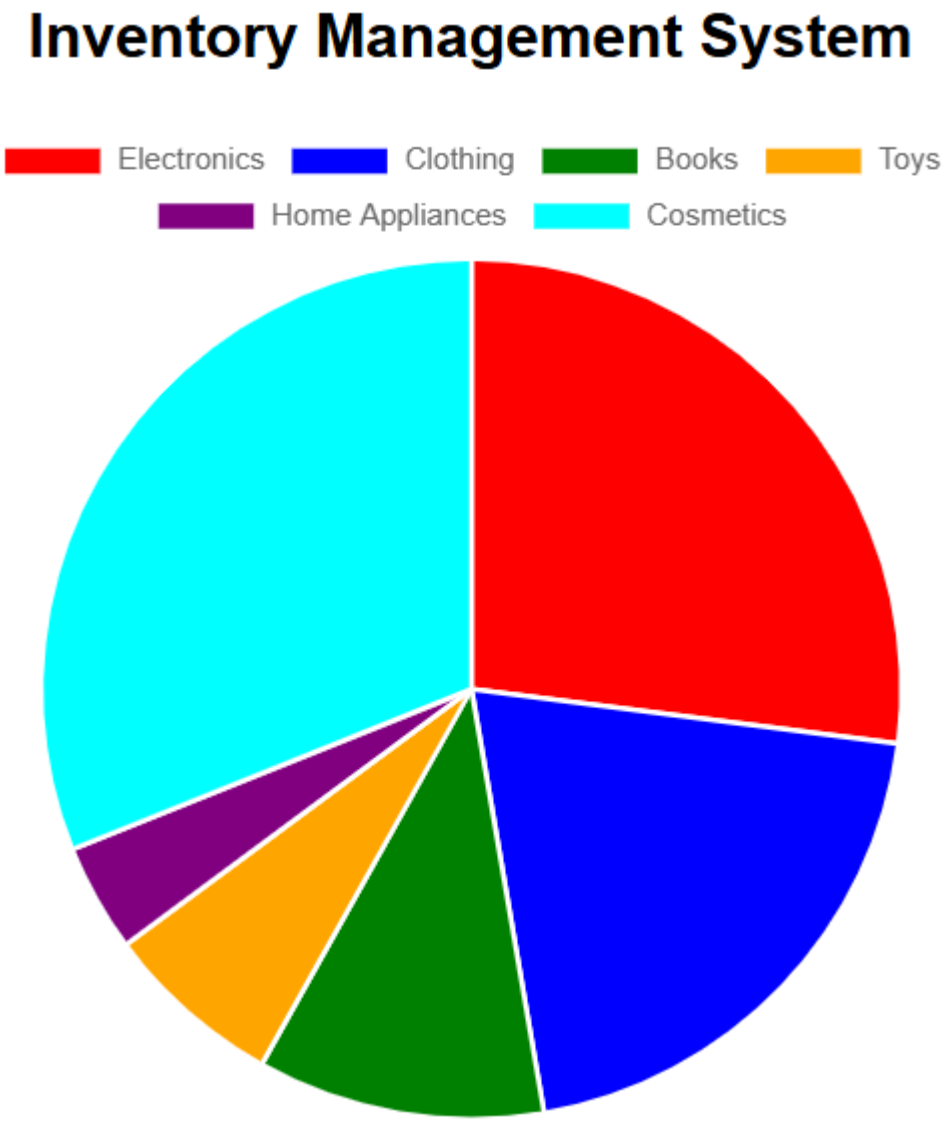
- Created data for categories like Electronics, Clothing, Books, etc.
- Assigned values for each category
- Defined labels and dataset

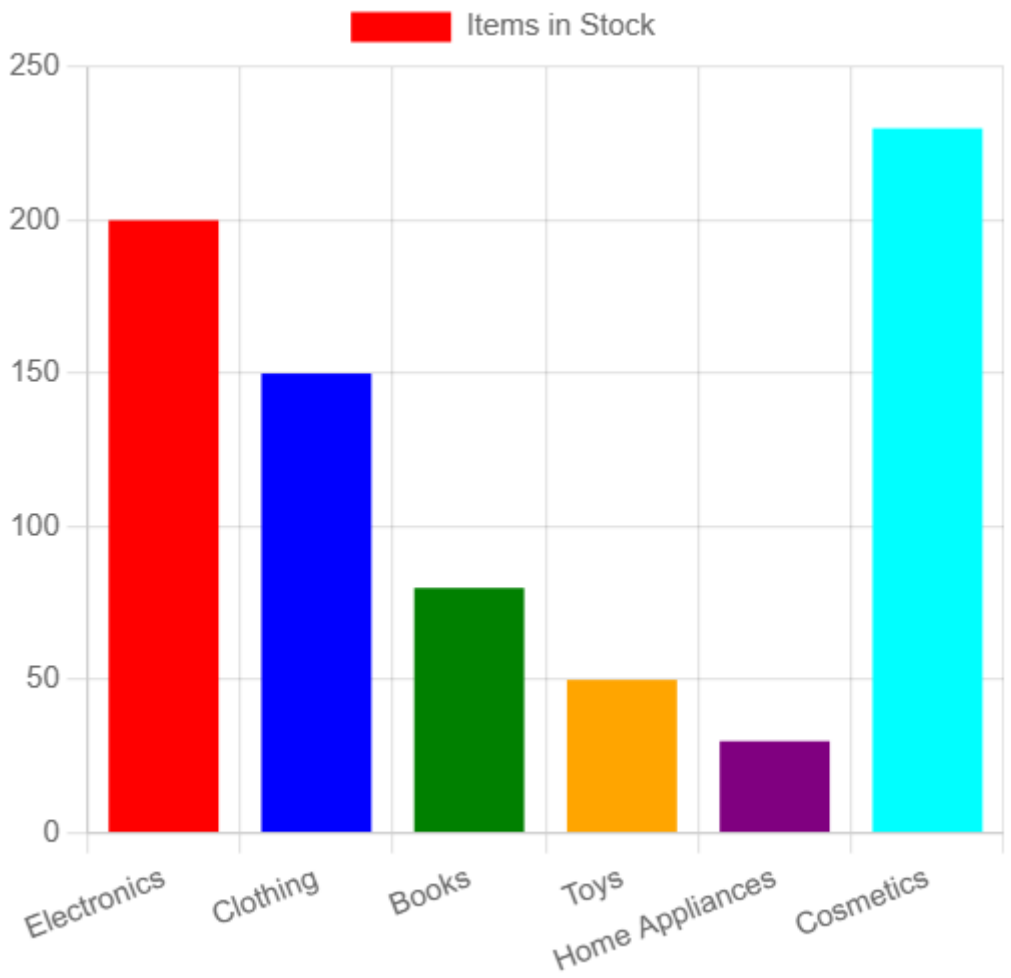
**Step 3: Create Charts**

- Used Chart.js to create:
    - Pie chart for distribution
    - Bar chart for comparison
- Configured chart type, labels, and colors

**Step 4: Display Output**

- Displayed charts on the webpage
- Verified correct visualization of data





Items in Stock
