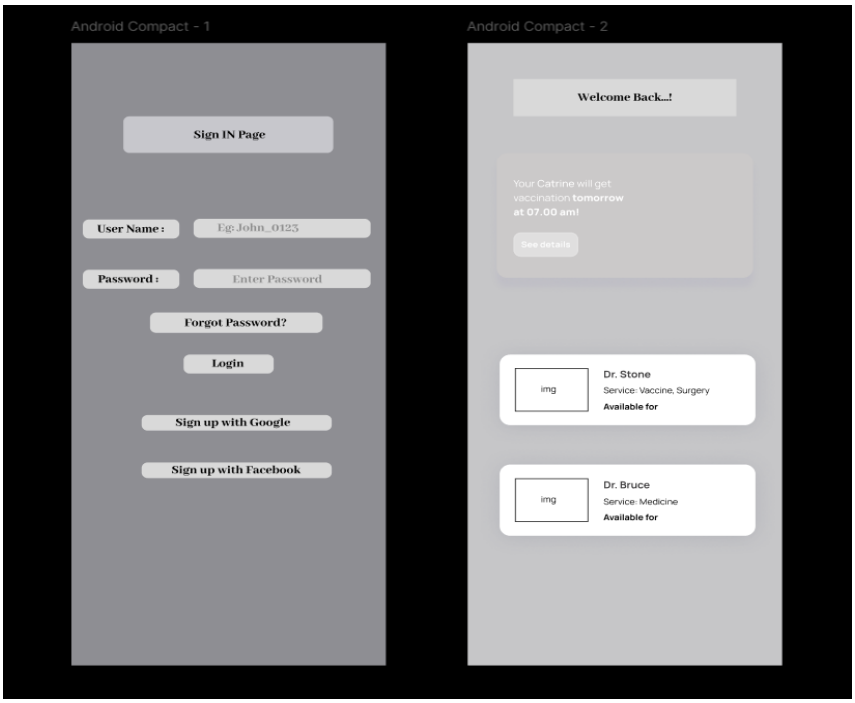
Experiment 1

Aim

To analyse an existing mobile UI design, identify usability problems, and redesign the interface using better UI/UX principles to improve usability and visual appeal.

Old UI Design (Bad Design)



Features & Drawbacks Identified

1. Flat and Dull Interface

- The login and dashboard screens use a very **plain and dull background**.
- There are **no engaging visual elements** such as images, icons, or illustrations.
- The overall interface looks **outdated and uninteresting**, which reduces user engagement.

2. Poor Visual Appearance

- The background uses a **simple grey color**, which makes the interface look lifeless.
- The UI components such as buttons and input fields appear very basic.
- There is **no modern styling or visual hierarchy**.

3. Poor Input Field Design

- The username and password fields are **simple rectangular boxes** with minimal styling.
- The placeholders and labels are not clearly differentiated.
- There is **no visual feedback** for the user while entering information.

4. Low Contrast and Readability

- The interface uses **light colors with minimal contrast**.
- Text elements are not emphasized properly, making them harder to read.
- Important actions like **Login** are not visually highlighted.

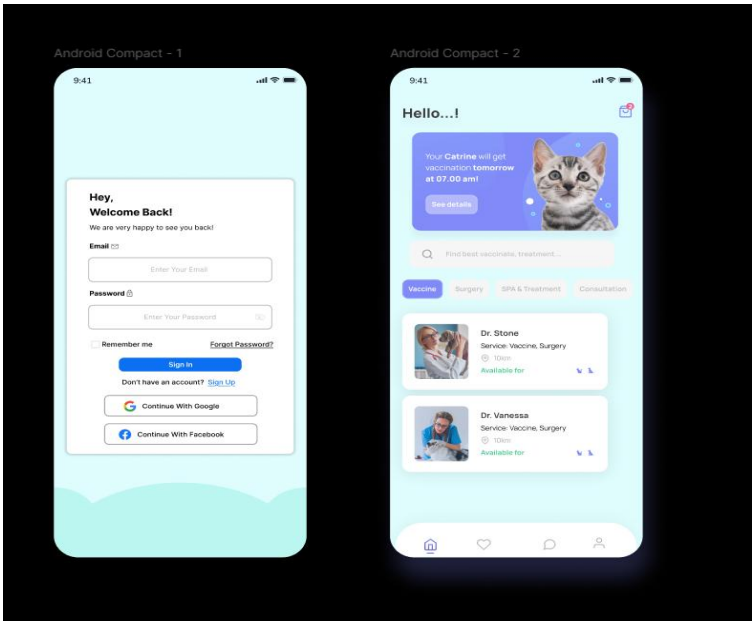
5. Unstructured Layout

- UI elements such as buttons and text fields are placed with **inconsistent spacing**.
- There is **no clear grouping** of related elements.
- The screen appears **unorganized and less intuitive**.

6. Basic Card Layout

- The doctor information cards contain only **placeholder images and simple text**.
- The layout lacks **visual hierarchy and spacing**.
- The design does not guide the user's attention to important details.

Modified UI Design (Improved Design)



Features & Enhancements

1. Modern and Attractive Interface

- A **soft blue background with curved shapes** is used to create a modern look.
- The interface now includes **better visual elements and clean design**.
- The overall design appears **more professional and user-friendly**.

2. Improved Login Screen

- The login form is placed inside a **clean white card layout**.
- The interface now includes a **welcome message** to create a friendly user experience.
- Input fields are designed with **better borders, spacing, and icons**.

3. Better Typography

- Text sizes are clearly differentiated.
- Important headings such as **"Welcome Back"** are larger and bolder.
- Labels, buttons, and descriptions use **consistent font styles**.

4. High Contrast and Readability

- The design uses **dark text on a light background**, improving readability.
- The **Sign In button** is highlighted using a strong blue color.
- Important elements are clearly visible.

5. Structured Layout

- UI components are **aligned properly with consistent spacing**.
- Elements are grouped logically, improving usability.
- The layout now follows a **clear visual hierarchy**.

6. Improved Doctor Cards

- Each doctor card now includes:
  - Profile image
  - Doctor name
  - Services offered
  - Distance and availability
- Cards have **rounded corners and shadows**, giving a modern appearance.

7. Better Navigation

- The dashboard includes a **bottom navigation bar** for easier navigation.
- Icons are used to represent different sections of the app.

8. Enhanced Visual Design

- Images and icons are added to make the interface more engaging.
- The card design and spacing improve overall visual clarity.
- The layout now looks **clean, modern, and structured**.

Result

The redesigned UI significantly improves usability, readability, and visual appeal. By applying modern UI/UX principles such as **better typography, improved layout, higher contrast, and structured components**, the interface becomes more user-friendly and visually attractive.
