EXPERIMENT - 07

Aim :

To design different app layouts using GIMP and evaluate user feedback on aesthetics and usability.

Introduction

User Interface design plays an important role in improving user experience. Colors, layout structure, and spacing affect how users interact with an application.

In this experiment, different color variations of the same UI layout are created using GIMP. These layouts are evaluated based on user feedback to identify the most effective design.

Procedure :

Step 1: Create New Project

- **Open GIMP application**
- **Go to File → New**
- **Set canvas size to 1080 × 1920 pixels (mobile screen size)**
- **Click OK to create the workspace**

Step 2: Design Base Layout

- **Used Rectangle Select Tool to create sections for input fields and buttons**
- **Applied colors using Bucket Fill Tool**
- **Used Text Tool to add:**
    - **Title (Welcome / Welcome Back)**
    - **Email and Password labels**
    - **Login button text**
- **Designed input boxes and buttons with proper spacing**
- **Organized all elements into separate layers for easy editing**

Step 3: Create Colour Variations

- **Duplicated the base layout using Image → Duplicate**
- **Modified background and button colors using:**
    - **Bucket Fill Tool**
    - **Colorize Tool**
- **Created three different layouts:**
    - **Dark theme**
    - **Red theme**
    - **Blue theme**

- **Ensured all layouts have same structure but different color styles**

Step 4: Export Layouts

- **Go to File → Export As**
- **Saved each design as separate image files:**
    - **layout1.png**
    - **layout2.png**
    - **layout3.png**
- **Selected PNG format for better image quality**

Step 5: Collect User Feedback

- **Shared all three layout images with users**
- **Asked users to evaluate based on:**
    - **Visual appearance**
    - **Usability**
    - **Readability**
    - **Color preference**
- **Collected responses and analyzed user opinions**

Step 6: Analyze and Finalize Design

- **Compared feedback for all layouts**
- **Identified strengths and weaknesses of each design**
- **Selected the best layout based on user preference**
- **Made final conclusion based on usability and aesthetics**

User Feedback :

Layout 1 (Dark Theme)

- The design looks simple and minimal with a dark background
- Provides a modern appearance but lacks proper contrast in some areas
- Text readability is slightly low due to dark tones
- Suitable for night mode but not ideal for all users
- Needs improvement in button visibility and color contrast

Layout 2 (Red Theme)

- The design is visually attractive and eye-catching
- Bright colors improve visibility of buttons and text
- Provides better emphasis on important elements like login button
- However, strong colors may feel overwhelming for long usage
- Slight adjustments in spacing and brightness can improve usability

Layout 3 (Blue Theme)

- The design looks clean, modern, and professional
- Good balance between background and text improves readability
- Buttons and input fields are clearly visible
- Provides comfortable viewing experience for users
- Consistent spacing and color usage enhances usability
- Most preferred layout among users

Result:

The experiment shows that color and layout significantly affect user experience. Among the three designs, **Layout 3 (Blue theme)** was selected as the best due to its clean appearance, good readability, and overall usability.
